Week 1 print and bring

Meet your robot - 12 children in four teams of three

Print for this session

[ ] 5 team sheets (four teams plus one spare).

[ ] 4 Week 1 mascot build cards (one per team).

[ ] 1 attendance sheet for the class.

[ ] 4 role-card sheets: two copies of both pages. Cut into 12 cards.

[ ] 2 hub guides, one per robot station.

16 class sheets total. Print W01_Class_Print_Packet.pdf once, single-sided. No opening assessment. The lead checklist and detailed notes are optional.

Bring and prepare

[ ] Use Reusable_Kit.md for the full equipment list. Pack two assembled charged bases, four laptops/chargers, tested data cables, four team build packs, four mounting templates, two mentor mascots, 14 pencils/erasers and two timers.

[ ] Pack six pre-cut card faces/name flags, 12 brace strips and one box of 12 crayons/markers. Keep chassis parts out of the build packs.

[ ] Save slides, notes, full W01_signal.py and references offline. Test BOTH bases: A left/B right, auxiliary motor unplugged. Raise wheels for the first signal run and verify the stop control.

[ ] Bring R3PTAR and a cardboard target only after a reliable rehearsal. Assign its operator and keep it outside student lanes.

Welcome and activities

[ ] Assign two robot mentors and two build mentors. Start with names, mentor introductions and the stop signal, then demonstrate the robots. Prior experience was already asked about; use no opening quiz or ability rating.

[ ] Use team sheets during the coached activity. Fit mascots only to stopped bases after a clearance check. Rotate the three jobs.

Closeout

[ ] Save four team projects; store four labeled builds; collect records privately; count parts; switch off hubs and assign charging.
