Week 5 print and bring

The floor tells the robot

Print for this session

[ ] 5 copies: W05_marker_Team_Sheet.pdf — 4 team sheets + 1 spare; share one sheet per team.

[ ] 4 copies: W05_marker_Build_Card.pdf — 1 per team; one page each.

[ ] 1 copies: Attendance.pdf — 12 rows, one class record.

[ ] 1 copies: W05_marker_Checklist.pdf — lead packing checklist; optional if checked digitally.

Required student/record sheets: 10 pages. Packing checklist and lead notes are optional. Week 1 also needs 4 role-card sheets and 2 hub-guide sheets. Reuse these later.

Bring the reusable kit

[ ] Use Reusable_Kit.md. Pack 14 pencils, 14 erasers, 4 rulers, 4 team trays/build packs, 4 laptops/chargers, 2 robot kits, 2 timers and tested cables.

This week’s additional supplies

[ ] 12 light card road tiles, 6 flat dark bands and 6 side platforms.

[ ] Each band starts at least 5 cm wide; increase width if the rehearsed step requires it.

[ ] 2 downward color sensors on D; 1 roll of matte dark tape for repairs.

Before children arrive

[ ] Open the Week 5 slide PDF/PPTX, speaker notes, complete W05_marker.py and build references. Save offline copies.

[ ] Run the week’s robot sequence on BOTH bases; confirm intended hub, ports, stop controls and save workflow.

[ ] Mount sensor roughly 1–2 cm above the surface as a starting setup, then bench-adjust until bright and dark readings clearly differ. Open W05_marker.py. Put the marker about 25 cm ahead of the sensor starting position. Retest under room lighting. Prepare two mentor examples and four labeled team build packs. Rehearse attachment clearance, a hand test and a quick swap. Show the hub color guide.
