Week 6 print and bring

A rescue attachment

Print for this session

[ ] 5 copies: W06_rescue_Team_Sheet.pdf — 4 team sheets + 1 spare; share one sheet per team.

[ ] 4 copies: W06_rescue_Build_Card.pdf — 1 per team; one page each.

[ ] 1 copies: Attendance.pdf — 12 rows, one class record.

[ ] 1 copies: W06_rescue_Checklist.pdf — lead packing checklist; optional if checked digitally.

Required student/record sheets: 10 pages. Packing checklist and lead notes are optional. Week 1 also needs 4 role-card sheets and 2 hub-guide sheets. Reuse these later.

Bring the reusable kit

[ ] Use Reusable_Kit.md. Pack 14 pencils, 14 erasers, 4 rulers, 4 team trays/build packs, 4 laptops/chargers, 2 robot kits, 2 timers and tested cables.

This week’s additional supplies

[ ] 6 guide bases and 12 short side strips, or equivalent allocated beams and pins.

[ ] 6 lightweight cubes: 4 at build tables + 2 at robots.

[ ] 2 tested marker lanes and 2 mentor sample guides, with sensor D clear.

Before children arrive

[ ] Open the Week 6 slide PDF/PPTX, speaker notes, complete W06_rescue.py and build references. Save offline copies.

[ ] Run the week’s robot sequence on BOTH bases; confirm intended hub, ports, stop controls and save workflow.

[ ] Reserve equal spare parts for each team. Test a passive plow mount. Place the stop strip 25 cm ahead of the color sensor at the starting pose. After a dry run, mark the cube delivery zone ahead of the stopped plow. Open W06_rescue.py. Prepare two mentor examples and four labeled team build packs. Rehearse attachment clearance, a hand test and a quick swap. Show the hub color guide.
