Week 3 build card

A dancing character with moving parts

Team ____ A ____ B ____ C ____

Build a lightweight character with arms or a feature that can move by hand and still stays attached.

Materials: Light beams, pins, an axle or loose hinge, pre-cut card and the clearance template. No extra motor is required.

Try it

1. Build the character and a stable support.

2. Add a free-moving arm, hinge or axle that stays outside the wheel path.

3. Move it by hand ten times and improve a loose or tipping part.

Our jobs

Builder connects. Designer chooses parts and checks the plan. Tester hand-tests and describes the result. Everyone builds. Rotate when the mentor calls time.

Test and improve

Moving feature works by hand without jamming; support survives gentle handling.

We noticed _____. We changed _____.

The tested character may ride on the stopped base after a mentor clearance check. Its mechanism is passive; the robot program makes the base dance.

Fit only to a stopped robot after the mentor checks clearance. Leave wheels, buttons, cables and sensors clear.
