Week 7 build card

A small community mission scene

Team ____ A ____ B ____ C ____

Build a small scene or improve an attachment for a chosen community job.

Materials: Earlier team attachments, spare parts, pre-cut card, tape, a lightweight cube, and parking or marker course pieces.

Try it

1. Choose a user and one job: deliver to a floor marker or stop near a garage wall.

2. Build the matching destination, useful attachment or model of the user's need.

3. Hand-test the scene, identify one weak feature and improve it.

Our jobs

Builder connects. Designer chooses parts and checks the plan. Tester hand-tests and describes the result. Everyone builds. Rotate when the mentor calls time.

Test and improve

One useful job, a clear route and a visible success condition; no new untested electronics.

We noticed _____. We changed _____.

The robot uses one familiar tested mission. T1/T3 can test with mentor course pieces before their own scene is built. Combine the approved scene and program in the retest.

Fit only to a stopped robot after the mentor checks clearance. Leave wheels, buttons, cables and sensors clear.
