# Meet your robot

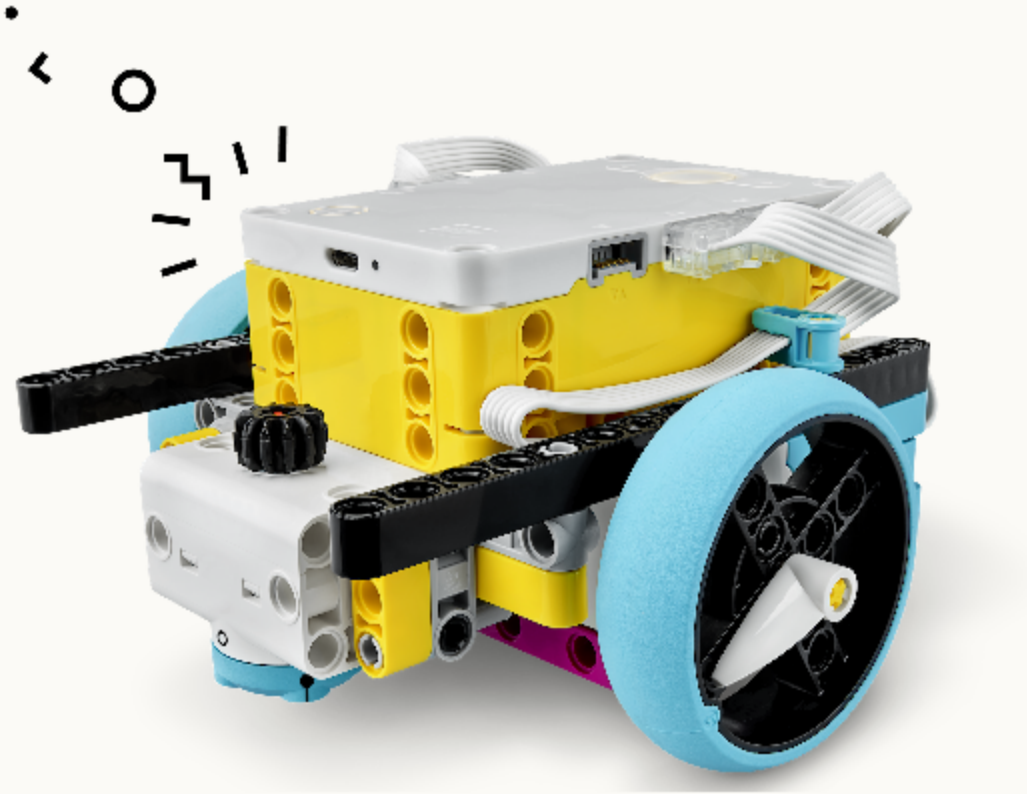

A signal and a first movement

# Today’s robot challenge

A one-letter welcome signal

A short forward move

A prediction about the order

**GREEN steady: on**

**ORANGE flashing: charge**

**RED flashing: stop + mentor**

Center button lights. A letter on the display is your program’s output.

# Sequence and a function call

```
await signal("Y")
await pause(500)
await drive(90)
```

**Our prediction**

Which instruction happens first?

What changes if the last line moves to the top?

Reading fragment from the complete supplied project

# Our robot and build jobs

Driver edits and starts after “clear.”

Navigator predicts and resets the stopped robot.

Observer watches, measures and records.

Other team builds. Everyone rotates jobs.

Robot turns: rotate every 4 minutes. Retests: every 2 minutes.

# Evidence from our test

We changed _____.

We predicted _____.

We observed _____.

Our next test would _____.

# What we learned and noticed

What did you learn about instruction order?

What did you notice when the robot ran?

What would you change or build next?

Save your team project. Store your build. Reset the robot and parts.
