Community robot mission

Teams choose and test a complete job

Today’s robot challenge

A user and a useful job

Three ordered actions

A measurable goal for the demonstration

GREEN steady: on

ORANGE flashing: charge

RED flashing: stop + mentor

Center button lights. A letter on the display is your program’s output.

Decomposition and integration

```
mission = "marker"
if mission == "marker":
    result = await seek_marker(threshold)
else:
    result = await park(stop_mm)
print(result)
```

Our prediction

Which part of your mission is least certain?

What small test could answer that first?

Reading fragment from the complete supplied project

Our robot and build jobs

Driver edits and starts after “clear.”

Navigator predicts and resets the stopped robot.

Observer watches, measures and records.

Other team builds. Everyone rotates jobs.

Robot turns: rotate every 4 minutes. Retests: every 2 minutes.

Evidence from our test

We changed _____.

We predicted _____.

We observed _____.

Our next test would _____.

What we learned and noticed

What did you learn while combining your mission?

What did you observe in your first complete test?

What will you improve before the showcase?

Save your team project. Store your build. Reset the robot and parts.
