Robot showcase

Demonstration and next steps

Today’s robot challenge

A 45-second explanation

A short robot demonstration

An honest account of the result

GREEN steady: on

ORANGE flashing: charge

RED flashing: stop + mentor

Center button lights. A letter on the display is your program’s output.

Explanation, evidence, and reflection

```
await signal("Y")
result = await seek_marker(threshold)
print("Our result:", result)
```

Our prediction

What do you expect the program to report?

What evidence can you explain if the run fails?

Reading fragment from the complete supplied project

Our demonstration order

Each team has four minutes, including reset.

All three explain one part of the mission.

Run, observe and answer one question.

Between turns: finish and test your exhibit.

Rehearsal: rotate every 2 minutes.

Evidence from our test

We changed _____.

We predicted _____.

We observed _____.

Our next test would _____.

What we learned and noticed

What can you explain or do now?

What did you notice in today’s demonstrations?

What would you like to build or explore next?

Save your team project. Store your build. Reset the robot and parts.
