Program evaluation and partner forms

Use these forms to improve the pilot and preserve evidence that can support the team's outreach story. They are blank working templates. No participant counts, learning gains, quotes, or future recruitment outcomes have been invented.

A small set of useful measures

Record unique participants, attendance at each session, individual baseline and final responses, a brief demonstration rubric, mentor preparation and delivery hours, and YMCA feedback. Keep a sample of code or design work with a date and team ID. Track future interest and actual follow-on participation separately.

Responsible record keeping

The adult coordinator keeps identifiable registration and contact details in the YMCA's approved system. Use student IDs in the teaching log. Obtain the agreed permission before collecting or publishing a photo, quote, or identifiable work. Share aggregate results in award materials and keep private records access-limited. Do not require publicity permission to participate.

Counts that mean different things

Unique students counts each child once. Participant sessions counts one child attending one meeting. Contact hours sums actual attendance time across participants. Mentor hours counts each mentor's actual time and distinguishes preparation from instruction. Family visitors are a separate count. Avoid adding these different measures into a single reach number.

Evidence ownership

A high school mentor records teaching observations. The adult lead checks the records and consent status. The YMCA contact confirms dates, activities, and partner feedback. Student award writers can use approved summaries and anonymized examples. A document link alone does not establish that an activity occurred.

Longer term follow through

Ask whether the YMCA wants a repeat cohort and what should change. Offer a future team open house through family contacts who opted in. Record actual later participation when it happens, with permission. Do not predict team recruitment success from interest ratings.

Session attendance and delivery record

Session number _____ Date _____ Actual start _____ Actual end _____

Adult lead _____ Mentors _____

Student ID	Minutes present	Language used	Driver turn confirmed	Notes
S01				
S02				
S03				
S04				
S05				
S06				
S07				
S08				
S09				
S10				
S11				
S12				

Use language labels Python, Word Blocks, or Unplugged. A short observation can identify one concept explained or an access adjustment. Keep medical and family information out of this sheet.

Unique students today _____ Sum of participant minutes _____ / 60 = contact hours _____

Mentor preparation hours _____ Mentor delivery hours _____ Adult hours _____

What worked and what should change next week

_____

_____

_____

Equipment or file issue to resolve before next session

_____

_____

Individual learning and demonstration record

Student ID	Baseline /8	Final /8	Sessions attended	Language and support
S01				
S02				
S03				
S04				
S05				
S06				
S07				
S08				
S09				
S10				
S11				
S12				

Matched students with both checks _____ Baseline mean _____ Final mean _____

Do not fill a missing assessment with zero. Calculate change only across the same matched students. Report the sample size and note absences.

Dimension	0	1	2
Program explanation	No explanation yet	Names an action with help	Explains sequence or decision and predicts a result
Test evidence	No observation recorded	One observation recorded	Uses a recorded result to justify a change
Design reasoning	No reason stated	Names a design choice	Connects choice to a need or tradeoff
Shared participation	No turn despite support	Participation with repeated support	Contributes and shares control or an accessible equivalent

Team ID _____ Student ID _____ Scores ___ / ___ / ___ / ___ Date _____

Observed evidence, including what the student said or pointed to

_____

_____

YMCA partner feedback

Partner contact and role _____ Date _____

Please answer from your observations. A short signed email or completed form can confirm the activity. Do not supply an endorsement you do not agree with.

1. Which dates and activities can you confirm took place?

2. What community need did the program address, and who was able to participate?

3. What did you observe students learning or enjoying? Please give one concrete example.

4. What created difficulty for families, staff, or students?

5. Would you host another cohort? What should change first?

6. May the team use your feedback in its outreach documentation? Identify any wording or identifying details that must remain private.

_____

_____

_____

_____

_____

_____

_____

_____

Name _____ Role _____ Confirmation date _____

Evidence summary and award preparation

Program dates _____ Prepared by _____

Claim to consider	Evidence required	Actual result or file reference
We delivered an eight-session program	Dated schedules and attendance records	
Students learned programming ideas	Matched baseline/final checks and examples	
High school students led instruction	Mentor roster, workshop record, teaching reflections	
The YMCA gained a useful activity	Partner feedback and confirmed dates	
Students continued in STEM	Actual follow-on attendance or participation	
The effort is sustainable	Repeat plan, trained successors, stored curriculum	

A truthful narrative structure

“We identified [need] with [partner]. Student mentors delivered [actual activity] for [unique count] students across [completed sessions]. Among [matched sample size] students, [observed change]. The partner reported [approved feedback]. We changed [specific aspect] and plan [clearly labeled next step].” Leave unknown fields blank until evidence exists.

Award use

Engineering Inspiration and Impact have different evaluation processes. Use the current official FIRST pages linked in the proposal. This packet supports evidence gathering; it does not guarantee an award or replace the team’s broader story. Describe this as a community program unless it actually becomes a registered FIRST team. Do not call participants new FIRST team members merely because they attended.

Sustainability checklist

Identify next year’s student mentor lead, retain known-good files and setup photos, make a parts replacement plan, review the eight-session sequence with the YMCA, and decide whether to repeat or expand only after evaluating the pilot.

Family invitation and follow up draft

Use after the YMCA confirms registration details. Replace the blanks before sharing. This draft has not been sent.

MechaRAMS and the YMCA are preparing eight robotics sessions for 12 children in grades 5 and 6. Teams of three build removable attachments and course models, test robot missions, use small prepared code recipes, and explain their designs. Beginners are welcome. No home robot or prior programming experience is required.

Proposed meeting day and time _____ Location _____

Confirmed dates _____ Registration method _____

Fee or access arrangements _____ Contact _____

Please direct accommodation, pickup, and registration questions to the YMCA contact. The team will share final enrollment and scheduling information after the pilot arrangements are confirmed.

Optional next step after the program

“Would your family like information about a future high school robotics open house or another community STEM activity? Yes / No. Please provide your response through the YMCA’s agreed contact process.” This is an interest option, not a commitment to join the high school team.

Student mentor reflection

After each meeting, complete these prompts: One student idea I made room for was ___. One question that helped a student reason was ___. A time I took over too quickly was ___. Next week I will ___.
