Week 7 timed delivery

Team ____ Kit ____ Date ____ Timed distance: 60 cm

Our user and delivery job: _____

Fixed travel: ____ wheel degrees. Approved speeds: _____

We predict a speed change will: _____

Keep kit, floor, start, cube, tray and travel fixed when comparing speed. Then compare our cradle at the same speed as the mentor tray. The mentor starts timing at first movement and stops at the chassis mark crossing the finish. Record seconds to one decimal place.

Valid (Y): crosses, keeps cargo, stays in lane and stops in the runout. Record N for any failure. Write DNF if it never crosses. Keep every attempt.

Trial	Tray	Speed wheel deg/s	Time (s) or DNF	Valid Y/N	What happened?
A1	Mentor	200	____	____	
A2	Mentor	200	____	____	
A3	Mentor	200	____	____	
B1	Mentor	____	____	____	
B2	Mentor	____	____	____	
B3	Mentor	____	____	____	
C1	Our cradle	____	____	____	
C2	Our cradle	____	____	____	
C3	Our cradle	____	____	____	

B is optional: one approved higher speed for all three runs, or mark SKIP. Use one unchanged speed for C, matching A or B. Each child drives once per set used.

Successful trials: A ____ / 3; B ____ / 3 or skipped; C ____ / 3.

For a complete 3/3 valid set only: mean = (time 1 + time 2 + time 3) / 3.

Mean A ____ s; B ____ s; C ____ s. Leave blank if failed or incomplete.

Showcase choice: tray ____ speed ____; tested 3/3? ____

Our build change and result: _____

Next test: _____

Close stopwatch times can be a tie. Choose a fast, reliable delivery supported by trials.
